# FEMTO D4

## **INSTALLATION GUIDE**

#### **COPYRIGHT**

Electrex is a trademark of Akse S.r.I. All rights reserved.

It is forbidden to duplicate, adapt, transcript this document without Akse written authorization, except when regulated accordingly by the Copyright Laws.

#### WARRANTY

This product is covered by a warranty against material and manufacturing defects for a 24 months period from the manufacturing date.

The warranty does not cover the defects that are due to:

- · Negligent and improper use
- Failures caused by atmospheric hazards
- Acts of vandalism
- · Wear out of materials
- Firmware upgrades

Akse reserves the right, at its discretion, to repair or substitute the faulty products

The warranty is not applicable to the products that will result defective in consequence of a negligent and improper use or an operating procedure not contemplated in this manual.

#### **RETURN AND REPAIR FORMALITIES**

Akse accepts the return of instruments for repair only when authorized in advance. The transport costs are at customer charge.

# **RE-SHIPPING OF REPAIRED PRODUCT**

The terms for re-shipment of repaired products are ex-works, i.e. the transport costs are at customer charge.

Products returned as detective but found to be perfectly working by our laboratories, will be charged a flat fee to account for checking and testing time irrespective of the warranty terms

#### **SAFETY**

This instrument was manufactured and tested in compliance with CEI EN 61010-1 CAT III -300V, class 2, standards for operating voltages up to 300 VAC rms phase to neutral. In order to maintain this condition and to ensure safe operation, the user must comply with the indications and markings contained in the following instructions:

- When the instrument is received, before starting its installation, check that it is intact and no damage occurred during transport.
- Before mounting, ensure that the instrument operating voltages and the mains voltage are compatible then proceed with the installation.

- The instrument power supply needs no earth connection.
- The instrument is not equipped with a power supply fuse; a suitable external protection fuse must be foreseen by the contractor.
- Maintenance and/or repair must be carried out only by qualified, authorized personnel
- If there is ever the suspicion that safe operation is no longer possible, the instrument must be taken out of service and precautions taken against its accidental use.
- Operation is no longer safe when:
- 1) There is clearly visible damage.
- 2) The instrument no longer functions.
- 3) After lengthy storage in unfavorable conditions.
- 4) After serious damage occurred during transport

The instruments must be installed in respect of all the local regulations.

#### **OPERATOR SAFETY**

Warning: Failure to observe the following instructions may lead to a serious danger of death.

- During normal operation dangerous voltages can occur on instrument terminals and on voltage and current transformers. Energized voltage and current transformers may generate lethal voltages. Follow carefully the standard safety precautions while carrying out any installation or service operation.
- The terminals of the instrument must not be accessible by the user after the installation.
   The user should only be allowed to access the instrument front panel where the display is located.
- Do not use the digital outputs for protection functions nor for power limitation functions. The instrument is suitable only for secondary protection functions.
- The instrument must be protected by a breaking device capable of interrupting both the power supply and the measurement terminals. It must be easily reachable by the operator and well identified as instrument cut-off device.
- The instrument and its connections must be carefully protected against short-circuit.

**Precautions:** Failure to respect the following instructions may irreversibly damage to the instrument.

- The outputs and the options operate at low voltage level; they cannot be powered by any unspecified external voltage.
- The application of currents not compatible with the current inputs levels will damage to the instrument.

Further documentation may be downloaded from our web site www.electrex.it.

# **DECLARATION OF CONFORMITY**

Akse hereby declares that its range of products complies with the following directives EMC 89/336/EEC 73/23CE 93/68 CE and complies with the following product's standard CEI CEI EN 61326 – IEC 61326 CEI EN 61010 – IEC 61010

The product has been tested in the typical wiring configuration and with peripherals conforming to the EMC directive and the LV directive.

Subject to modification without notice. Edition 14-09-2009.

# **READINGS**

Keep pressed for 2 seconds to display:

- Type of instrument
- Firmware version
- Serial number - RS485 address

1PH-2W	1 phase 2 wires, monophase
Note n.2	
POWERS	Integration time of the average value (AVG) and peak value (MD) for power (from 1 to 60 minutes)
CURRENTS	Integration time of the average value (AVG) and peak value (MD) for current (from 1 to 60 minutes)
Note n.3	current (from 1 to 60 minutes)
Normal	Classic Alarm with reference to a fixed threshold or to maximum and
	minimum delay and applicable hysteresis. "AVG" parameter is not used.
1-OF-3	Consider also the 2 following registers of the selected one in "MEAS". Works on a fixed max or min threshold with delay and applicable hysteresis. If one of the three register exceed the threshold the alarm goes on. "AVG" parameter is not used.
3-OF-3	Consider also the 2 following registers of the selected one in "MEAS".
	Works on a fixed max or min threshold with delay and applicable hysteresis. When all the three register exceed the threshold the alarm goes on. "AVG"
DERIV	parameter is not used. "THRE" parameter becomes a % value, "AVG" parameter is used. The
	instant value applied to the alarm on "MEAS" is compared with its value mediated obtained on the basis of the time set on "AVC". When the instantaneous value combined alarm differs in more (setting "Max") or less (setting "MIN") from the average value ("AVG") of the percentage set on "THRE" the alarm goes on. With delay and applicable hysteresis.
UNBAL	Consider also the 2 following registers of the selected one in "MEAS". "THRE" parameter becomes a % value. Alarm goes on when one of the three register is different from the percentage set on "THRE" comply with the higher value of the three read register if "MAX" is set on "TYPE", or comply with the lower value of the three register if "MIN" is set on "TYPE" With delay and applicable hysteresis.
Note n.4	
MAX	Alarm setting in excess compared with the established conditions.  With the exception of "UNBAL".
MIN	Alarm setting in decrease compared with the established conditions.
	With the exception of "UNBAL"
Note n.5	
MEAS	indicates which register (and thus measure) the alarm is related. See table n.1 input register.
THRE	Alarm threshold in absolute value, with the exception made for "DERIV" and "UNBAL" in which the value inserted becomes a percentage.
Note n.6	and orthogen in which the value incorted becomes a percentage.
AVG	Parameter to be used only in "DERIV" mode. Is the duration of the reference (in seconds) used to create a reference value for the istantaneous readings.
Note n.7	
NORMAL	Physical output of the alarm excited during the duration of the alarm. It restores automatically
HOLD	Output remains excited until manual reset made via Modbus
PULSE-L	Output generate a 500ms impulse when the alarm goes on.
PULSE-S	Output generate a 100ms impulse when the alarm goes on.
Note n.8	Trackles with matter as issuedaine
PULSE ALARM	Enables exit function as impulsive  Enables exit function as alarm
REMOTE	Enables function output via protocol Modbus
NO	Normally open
NC	Normally closed
Note n.9	
P-IMP	Imported Active Power (Energy)
QL-IMP	Imported Reactive Inductive Power (Energy)
QC-IMP	Imported Reactive Capacitive Power (Energy)
S-IMP P-EXP	Imported Apparent Power (Energy)
QL-EXP	Exported Active Power (Energy)  Exported Reactive Inductive Power (Energy)
QC-EXP	Exported Reactive Inductive Power (Energy)
S-EXP	Exported Apparent Power (Energy)
Note n.10	
YES	Referred to CT primary
NO	Referred to CT secondary
Note n.11	
ALLARME 1	Alarm related to the physical output: DIGITAL OUT 1 (DO1, terminal 8)
ALLARME 2	Alarm related to the physical output: DIGITAL OUT 2 (DO2, terminal 9)
ALLARME 3 ALLARME 4	Only MODBUS alarm Only MODBUS alarm
ALLARIVIE 4	Only Iniodudo alaili

# **MESSAGE "CFG ERROR"**

During the set up operation a "CFG ERROR" message could appear. This means that some wrong parameters are typed. To restore the factory default settings use the following procedure (RESTORE FACTORY SETTING):

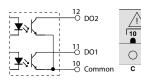

Once this procedure is done the meter is configured with its factory default settings. Stored data will remain after the restore operation.

## **DIGITAL INPUTS AND OUTPUTS CONNECTION**

(only for the version PFA6C11-12)

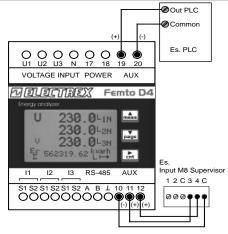

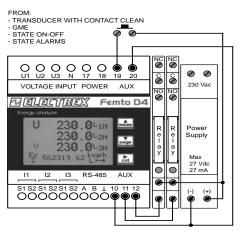

Digital Inputs		
Supply voltage (external):	from 10 to 30 Vdc	
Current consumption:	from 2 to 10mA	
Max. count frequency	10 or 100Hz	
N.B. For gas meters a galvanic separation is needed per ATEX standards		

Digital outputs (optocoupled transistor type for DIN 43864)	NPN
Maximum applicable voltage:	27 Vdc
Maximum switchable current:	27 mA

# **INPUT & OUTPUTS CONNECTION EXAMPLE**

# **ALARM SET UP EXAMPLE**

To ensure that the exit "DIGITAL OUT 1" remain excited for the alarm duration (latching) when average active power (MEAS 344) exceeds the value of 100 kW, hysteresis, 5% and latency of 5 seconds set the parameters such as table:

	MODE (note n.2)	Normal, 1-OF-3, 3-OF-3, DERIV, UNBAL	NORMAL
	TYPE (note n.3)	MAX, MIN	MAX
ALARM 1 / A	MEAS (note n.4)	Controlled measure. See table n.1 for register selection	344
	THRE (note n.4)	Threshold value	100000
	HYST	1100 (%)	5
ALARM 1 / B	DELAY	199 (seconds)	5
ALARWII/D	AVG (note n.5)	199 (seconds)	1
	OUT (note n.6)	Normal, Hold, Pulse-L, Pulse-S	NORMAL
DIGITAL OUT 1	MODE	PULSE, ALARM, REMOTE	ALARM
DIGITAL OUT 1	POLARITY	NO, NC	NO

To ensure that the exit "DIGITAL OUT 2" remain excited for the alarm duration (latching) when average active power (MEAS 344) goes down the value of 90 kW, hysteresis, 5% and latency of 5 seconds set the parameters such as table:

ALARM 2 / A	MODE (note n.2)	Normal, 1-OF-3, 3-OF-3, DERIV, UNBAL	NORMAL
	TYPE (note n.3)	MAX, MIN	MIN
	MEAS (note n.4)	Controlled measure. See table n.1 for register selection	344
	THRE (note n.4)	Threshold value	90000
ALARM 2/B	HYST	1100 (%)	5
	DELAY	199 (seconds)	5
	AVG (note n.5)	199 (seconds)	1
	OUT (note n.6)	Normal, Hold, Pulse-L, Pulse-S	NORMAL
DIGITAL OUT 2	MODE	PULSE, ALARM, REMOTE	ALARM
	POLARITY	NO, NC	NO

#### **VOLTAGE AND CURRENT CONNECTION**

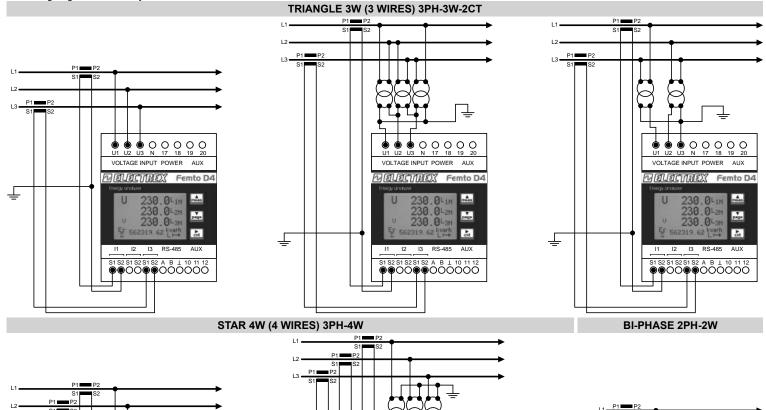

**Voltage connection:** Use cables with max cross-section of 2,5 mm² if stranded 4 mm² if rigid and connect them to the clamps marked VOLTAGE INPUT on the instrument according to the applicable diagrams that follow.

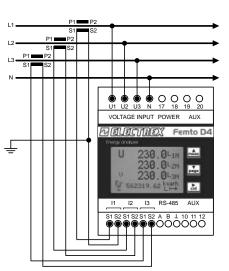

# Current connection

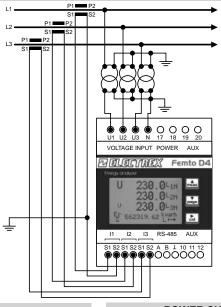

It is necessary to use external CTs with a primary rating adequate to the load to be metered and with a 5A or 1A secondary rating. Connect the CT output(s) to the terminals marked I1, I2, I3 (CURRENT INPUT) of the instrument according to the applicable diagrams that follow. Use cables with cross-section adequate to the VA rating of the CT and to the distance to be covered. The max cross-section for the terminals is 2,5 mm² if stranded and 4 mm² if rigid.

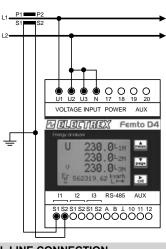

N.B. The CT secondary must always be in short circuit when not connected to the instrument in order to avoid damages and risks for the operator.

Warning: The phase relationship among voltage and current signals, the P1-P2 orientation and the S1-S2 connection of the CT(s) must be carefully respected. Disregard of this warning or of wiring diagram leads to major measurement errors.

# POWER SUPPLY AND SERIAL LINE CONNECTION

The instrument is fitted with a separate power supply. The power supply terminals are numbered (17) and (18). Use cables with max cross-section of 2,5 mm<sup>2</sup> if stranded, 4 mm<sup>2</sup> if rigid.
